

Amicarbazone 70% WDG

Description:

Amicarbazone is a new triazolinone herbicide intended for use in sugarcane field. It is highly effective against a wide range of weeds

Product Features:

- Well tolerated by sugarcane at recommended rate
- Highly effective
- Broad Spectrum Weed Control

Mode of Action:

It selectively inhibits acetolactase synthase, and enzyme involved in photosystem II of plants. It is absorbed through the roots of weeds and translocated to the growing tips and leaves where it inhibits photosynthesis causing yellowing of leaves and plant death.

Direction for Use:

Weeds: *Digitaria horizontalis* (Gros meinki)

When tank mixed with Krismat, will also control *Paspalum spp*, *Cyperus rotundus*, *Kyllinga spp*

Crop: Sugarcane

Time of Application: Spraying should be carried out when weeds are relatively young

Herbicides	Dosage per Arpent
Amicarbazone 70% WDG + Krismat	0.53 kg to 0.63 kg + 0.84 kg

Use an agricultural adjuvant like Complement Super @ 84ml per arpent

Important Notes:

- Higher rates of Amicarbazone should be used when a longer residual activity is required.
